

Recommendation on how to clean Topalit tabletops and windowsills

What do you need to do?

1. Use warm water and add dish-washing detergent, for example "Dawn", "Pril" or similar products.
2. Apply cleaning fluid by soft sponge, cotton fabric cloth or micro-fiber cloth.
3. Soften dried dirt, etc.
4. Wash and wipe surface to remove dirt, dust, etc.
5. In order to maintain a clean and hygienic surface clean the surface for a second time with fresh fluid and pure water.
6. If there are still dirt spots on the surface, spray water onto the surface and use a cleaning cream or fluid for stainless steel surfaces like "CIF-cream". Apply cream or fluid, rub and wipe with pressure using a micro-fiber cloth until you get a clean and shiny surface.

Besides it's cleaning performance, "CIF-cream" also seals the surface like furniture polish and thus keeps the surface clean for longer time.

In addition, very good cleaning effects can be achieved with dirt erasers like „Scotch-Brite stain-eraser“. This only needs to be moistened with a little water.

7. Remove remains of cream or fluid with fresh water and a piece of cloth.
8. Wipe surface dry by means of a dry piece of cloth.
9. Please do not use cleaning items that wear or scratch the surface of the table top and/or cleaning fluids that contain acid or develop acid.
